Measurement of fatty acid methyl esters (soy bean oil) using Shinwasorb

Analyses of fatty acid methyl esters (FAMES) are used to characterize lipid constituents in food products, and constitute an important role in food product analysis. Shown below is an example of an analysis of soybean oil fatty acid methyl esters (FAMES) using a column packed with a Shinwasorb packing material.

Column: 3.1 m x 3.2 mm I.D. Glass
Carrier gas: 40 ml/min N₂
Injection port temp.: 260°C

Sample volume: 1 µL
Column temp.: 230°C
Detector: FID 260°C
